Teamwork in Emergency Medical Teams

- This multidisciplinary research team is collaborating to bring the science of team effectiveness to emergency medicine
- Our project group is developing an infrastructure to create “synthetic” experiences by designing event-based scenarios, behavioral measures, and data capture the patient simulator at Wayne State can serve as an experimental research platform to study team processes and effectiveness
- We will investigate the effects of team interventions (team training, leadership, composition) on action team processes and performance effectiveness with a high level of realism
